

MANAN PANDEY

AI & MACHINE LEARNING UNDERGRADUATE

Faridabad, India, 121004 | manan.pandey1306@gmail.com | +91 93117 93090 | [Website \(Portfolio\)](#)

SUMMARY

AI/ML developer and B.Tech (Computer Science with AI & ML) student at VIT Bhopal, with hands-on experience shipping computer-vision and full-stack production systems. Built and deployed an automated multi-face-detection attendance platform (AWS Rekognition) and a real-time facial-expression-analysis product during an internship at IDEMIA. Comfortable owning a project end to end — from Python/TensorFlow model work to production-grade React/Next.js applications with RBAC, authentication, and billing logic.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL

AI / ML: Generative AI Programming, TensorFlow / TensorFlow.js, CNNs, Computer Vision, AWS Rekognition

Web & Cloud: REST API Integration & Development, AWS, Vercel, Firebase.

Practices: RBAC, OAuth/Auth Flows, Git, Agile Collaboration, Leadership & Team Collaboration

EXPERIENCE

IDEMIA India Pvt. Ltd. — AI/ML Intern

May 2026 – Jul 2026

Noida, India

- **EmotionAI platform:** developed a real-time facial expression analysis system using TensorFlow.js and a CNN trained on the FER-2013 dataset, enabling in-browser emotion inference without server roundtrips.
- **Product integration:** built an in-app chatbot and automated email-notification workflows around model outputs, extending the platform from a research prototype into an end-to-end usable product.
- **Cross-functional delivery:** collaborated with engineering stakeholders to integrate the model pipeline into an existing production codebase, gaining hands-on experience deploying AI-powered features to production environments.

SELECTED PROJECTS

ClassLens — AI-Powered Attendance System

Personal Project

- Built a full-stack web application enabling teachers to record classroom attendance in a single click using multi-face detection (Python, AWS Rekognition).
- Facilitated structured knowledge-sharing sessions with collaborators, improving code quality and project velocity across the team.

Hotel PG Management Portal

- Designing a web application to replace WhatsApp-based tenant communication with a structured admin portal for a student PG accommodation.
- Architected per-room shared electricity billing logic — the system's most technically complex component — to accurately split utility costs across tenants.

Employee Management System — Admin Portal with RBAC

- Designing an industry-grade admin portal with role-based dashboards (Management, Accounts, HR, Managers) and Indian payroll compliance (PF, ESI, TDS).
- Implemented Google OAuth login with account linking and a first-login password-enforcement flow for secure onboarding.

EDUCATION

VIT Bhopal University

Sep 2024 – Aug 2028

Bachelor of Technology, Computer Science with Artificial Intelligence & Machine Learning — Madhya Pradesh, India

CERTIFICATIONS

- Programming with Generative AI — Indian Institute of Science (IISc), Bangalore [Click Here](#)
- Python Programming Fundamentals — Microsoft [Click Here](#)
- Cloud Computing — Indian Institute of Technology, Kharagpur [Click Here](#)
- Applied Machine Learning in Python — University of Michigan [Click Here](#)

Languages Spoken: English, Hindi
